Boral Resources Launches New Website

August 14, 2018 – Boral Resources has launched an all-new website, www.flyash.com, showcasing the company's updated brand and expanded line of products and services.

Formed from the merger of Boral Material Technologies and Headwaters Resources in 2017, Boral Resources is now America's largest marketer of fly ash for concrete products and other building materials. The new site provides both producers and end users of coal combustion products (CCPs) with detailed information on the company's industry-leading products and services range, including:

Products

- Fly ash and highly reactive pozzolan materials to improve concrete strength and durability
- CCP-enhanced materials for both building construction and road stabilization
- Engineered materials that boost performance characteristics for specialized applications

Technologies

- Carbon Burn-Out technology to produce a consistent low-carbon, high-quality pozzolan
- Ammonia slip mitigation to remove excess ammonia from coal ash after combustion
- RestoreAir® to neutralize activated carbon's ability to interfere with concrete air entrainment

Services

- CCP management to help utilities minimize CCP disposal and meet environmental requirements
- Testing, analysis, and harvesting of previously disposed CCPs from landfills or surface impoundments in preparation for beneficial use
- Conversion of materials generated from pet coke and CFB boilers to usable products as an alternative to disposal
- Design and construction services related to fly ash, FGD, and bottom ash processing facilities
- Financing, design, construction, operation, and maintenance of FGD systems

"Flyash.com contains valuable information accumulated over decades, as Boral Resources' predecessor companies served as pioneers of the ash management and marketing industry," said Steve Benza, Boral Resources Vice President of Business Development. "Whether you are a utility interested in the most advanced strategies and technologies for ash management, or an ash user interested in material

characteristics and supply, there is something on the website for you."

Boral's new website includes a comprehensive reference section that makes all of the company's product literature available for free download, including product brochures, SDS sheets, technical bulletins, and related technical data. Also included are links to a wide range of government, academic, and industry organizations, data, and publications. A separate news section incorporates not only press releases related to company personnel, products, services, and acquisitions, but also a curated list of coal ash news briefs from around the world.

A new feature—an interactive map—gives customers the ability to easily find their nearest Boral Resources location. Mousing over the map shows the number of facilities in each U.S. state, while clicking on a state identifies the type and location of each.

About Boral Resources: Servicing 135 locations in 45 states, Boral Resources is the nation's largest manager and marketer of coal combustion products. The company operates an extensive distribution network for fly ash and related products, as well as provides site services to power plants. Boral Resources also offers an array of proprietary technologies for improving ash quality and availability.
